### Tools for the Locator Attachment

There are three tools included with the locator kit. The top tool on the left is used for removing the plastic attachment from the cap. The second tool is used to insert the abutments into the implants. The third tool is used to insert the plastic attachment into the metal housing. The photo on the left shows the removal of the plastic attachment in preparation for replacement. The Photo on the left shows the insertion of a new plastic attachment into the metal retentive cap.
