Comprehensive Reconstruction of Mandibular Jaw with Crowns & Bridge Restorations

A Long Distance Treatment Scenario

Third Visit

Visit number

3 was a fairly simple one. All we really did was to try in the castings for the final restoration. Visits 1 and 2 were set up with special time allotments to insure that we could accomplish everything necessary to keep to our schedule. Visit #2 was performed during our normal daily schedule since at this point, there were no more potential hidden surprises.

The photo at the left show the working casts for the construction of the final restorations.
