

Long Distance Implant Dentistry Conclusion

Last Updated Sunday, 13 April 2008

Comprehensive Reconstruction of Mandibular Jaw with Crowns & Bridge Restorations

A Long Distance Treatment Scenario

Conclusions

Long distance dental treatment is not particularly easy. It takes a lot of forethought and some adjustment for both the dentist and the patient. When it is properly done, it can prove to be a rewarding experience for both. If you are considering dental treatment by me in Boca Raton, Florida, you might want to check out my Treatment Information Page or check out a letter that this patient wrote to someone inquiring about her treatment... SRD

The photos on this page show the final restorations (above) and the provisional restorations (below). You can get a good idea of the accuracy of the implant placement which corresponds very closely to the actual tooth position.
