

Mini Implant Single Tooth Provisional

Last Updated Tuesday, 29 August 2006

Mini Dental Implants for Single Tooth Restorations

A provisional restoration is relined and cemented onto the MDL implant. The restoration is not in occlusion and the patient is instructed to not bite on this tooth.

The patient with her new smile. We will evaluate this implant over the next several months. If all goes well, I will convert the provisional restoration to a porcelain-fused-to-gold crown.
