Major Reconstruction of Maxillary and Mandibular Arches With Fixed Implant Restorations

This was the first course of implants. The maxillary ones did just fine. The lower ones all failed. My intention here was to sequence treatment so the patient would not have to wear complete dentures during the treatment. that did not work.... At this point, all the natural teeth are removed and I have placed and loaded more implants in the mandible (some more implants were lost in the mandible prior to this x-ray. This is the final panorex (actually taken at 6 months of loading.
