

## Reconstruction with Sinus Lift Pre-Op

Last Updated Tuesday, 29 August 2006

### Major Reconstruction with Maxillary Sinus Lift

The patient presented with several missing teeth, most notably on the upper right and upper left sides of his mouth. He was also wearing a removable partial denture replacing the teeth on the upper right. His bite was overclosed due to a lack of support and the anterior lower teeth were worn. The x-rays reveal large maxillary sinus. Also, note the deep overbite caused by the lack of a stable posterior occlusion....
