

# Learn Dental Implantology

Last Updated Friday, 28 March 2008

This is for dentists who really want to learn how to place and restore dental implants. Intra-Lock International, Inc. and Dr. Davidoff have put together a state of the art, in your office, implant training course. The course is available immediately on a first come, first served basis to any licensed dentist in the United States. Dr. Davidoff will come to your office to teach you and your staff everything you need to know to place and restore dental implants.

Here's how it works. You contact me directly and let me know about your situation and what you hope to achieve in your practice with dental implants. I will design a four day program for you which will teach you and your staff how to place and restore dental implants. I will teach you how to attract the patients you want to treat and I will teach you and your staff how to make these patients comfortable and confident in your practice. I will start off with a list of supplies that you will need and I will review records for patients that you would like to work on during the days I am there. The first day will be lecture, demonstration and hands-on work with models. The second and third days we will treat patients in your office. The fourth day we will summarize everything and give you a plan for performance and marketing. You will order your supplies as per my instructions from Intra-Lock America and we will make sure that you have total after support through our newly designed web site, [www.dds-online.com](http://www.dds-online.com). You will receive one year of telephone support directly from Dr. Davidoff plus ongoing support from Intra-Lock and the web site.

The courses available at this time are:

**Mini Dental Implants** - this course will feature the Intra-Lock MDL implant and drive-Lock system. For those who feel more advanced, it will also include the MILO implant system

**Standard Dental Implants** - This course will concentrate on placing and restoring regular sized dental implants in a conventional manner. It will feature both internal and external connection implants.

Full CE credits are available through DDS-Online. The fee for the mini implant course is \$10,000.00 plus instrumentation, supplies and implants. The fee for the standard implant course is \$14,000.00 plus instrumentation, supplies and implants. This course is the first of its kind to be run on a national basis. It will allow you to place yourself firmly in the rewarding implant dentistry market and allow you to compete with others in your area who have already achieved success with dental implants. Sign up today by contacting Dr. Davidoff directly at [srobert@dental-implants.com](mailto:srobert@dental-implants.com).
