Implant Reconstruction Reconstruction of entire dentition with Implants, Porcelain Crowns and Sinus Lifts...
Condylar Replacement This is a major reconstruction that was done Pro Bono... Maxillary Reconstruction with Sinus Lift
This patient had a failing maxillary reconstruction. It was necessary to place bone in her sinuses in order to get an optimum result. Major Reconstruction This is a patient treatment that encountered problems with implant failures during treatment. It took a while, but we did have a very successful outcome... Splinting Implants My reasoning why maxillary implants should be splinted in the edentulous patient. Replacing Lateral Incisors A very common situation is the congenitally missing lateral incisor. Here's how I handle it...

Immediate

Mini Implant Overdenture What do you do if you have a lower denture that moves around and you can't afford regular implants or you are afraid of having a surgical procedure? Read on... Immediate Non-Loaded Conical Implant Sometimes it is desirable to extract a tooth and immediately place an implant and a restoration. Here is how it is done...
